

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR
IDENTIFYING CHEMICAL COMPOUNDS HAVING DESIRED
PROPERTIES

ABSTRACT

A system, method, and computer program product for visualizing and interactively analyzing data relating to chemical compounds. A user selects a plurality of compounds to map, and also selects a method for evaluating similarity/dissimilarity between the selected compounds. A non-linear map is generated in accordance with the selected compounds and the selected method. The non-linear map has a point for each of the selected compounds, wherein a distance between any two points is representative of similarity/dissimilarity between the corresponding compounds. A portion of the non-linear map is then displayed. Users are enabled to interactively analyze compounds represented in the non-linear map.
